1. Dashboard

The dashboard provides a real-time overview of the system, including:

- Total residents/patients
- Staff member count
- Open incidents
- Tasks due today
- Facility occupancy percentage
- Incident overview (open, under investigation, resolved)
- Training completion status

This gives management a clear snapshot of operational performance and outstanding actions.

2. Resident Management

The Resident Management module allows:

- Adding and managing resident profiles
- Viewing and updating resident information
- Organising residents within the facility system

This covers the core requirement of maintaining structured resident records.

3. Care Planning

The Care Planning module supports:

- Creating new care plans
- Managing existing care plans
- Linking care plans to specific residents

This ensures personalised care tracking is fully supported within the system.

4. Incident Reports

The Incident Reports module allows:

- Reporting new incidents
- Tracking open incidents
- Monitoring incidents under investigation
- Marking incidents as resolved

There is also an overview section summarising incidents from the last 6 months, which supports compliance and audit tracking.

5. Medication Management & Medication Records

The system includes dedicated sections for:

- Medication Management
- Medication Records

This supports structured tracking of medication-related activities and documentation for residents.

6. HR Management

The HR module supports:

- Staff administration
- Staff-related records and management

This ensures workforce management is integrated into the system.

7. Staff Scheduling

The system includes a staff scheduling feature, allowing:

- Organising staff shifts
- Managing availability
- Assigning schedules appropriately

This supports operational planning.

8. Documents Management

The Documents Management section allows:

- Uploading and managing documentation
- Storing operational and compliance-related files

This centralises documentation within the system.

9. Performance Management

The Performance Management module supports:

- Tracking staff performance
- Managing performance-related data

This aligns with long-term quality control and improvement processes.

10. Training Module

The Training section includes:

- Training tracking

- Completion monitoring
- Expiry tracking

The dashboard also highlights expired or expiring training, which supports compliance and regulatory requirements.

11. Compliance

The Compliance module ensures:

- Regulatory-related tracking
- Organised compliance management

This supports audit readiness and governance.

12. Analytics

The Analytics section provides:

- Data insights
- System performance monitoring
- Operational metrics

This allows data-driven decision-making.

13. User Management

The User Management module allows:

- Managing system users
- Controlling access and roles

This ensures secure access control within the platform.

Final Confirmation

Based on my review, all required core modules and expected functionality are currently implemented within the system.

There are no missing primary features from the originally outlined scope.

At this stage, further work would be limited to:

- UI/UX refinements
- Performance optimisation
- Additional feature enhancements beyond the original requirements

Official Documentation v1.0

2026 Edition

Table of Contents

- **Part 1:** System Overview & Core Workflow
- **Part 2:** Visual User Guide (Screens & Buttons)
- **Part 3:** Detailed Module Guide (Audit, Meds, HR)
- **Part 4:** Troubleshooting & Support

🏗️ Part 1: How the System Works

This system is designed to manage the entire lifecycle of a care home, from admitting a resident to managing the staff who care for them.

The Core Workflow

The system connects **three main pillars**:

1. **Residents:** The people you care for.
2. **Staff (HR):** The people providing the care.
3. **Operations:** The building, stock, and compliance.

```
RESIDENT ADMITTED -> CARE PLAN CREATED -> MEDICATION SCHEDULED
       |                    |                     |
       v                    v                     v
  STAFF ASSIGNED  ->  DAILY LOGS RECORDED ->  COMPLIANCE AUDITED
```

🖼️ Part 2: Visual User Guide

A breakdown of the key screens and what every button does.

1. The Dashboard (Home Screen)

This is your "Mission Control". It gives you an instant summary of the home's safety status.

Button / Area	Icon	Function
Search Bar	🔍	Type any name ("Alice", "John") to jump straight to their file.
Alerts Bell	🔔	Shows Red Alerts for Low Stock or Accidents.
Quick Actions	⚡	Shortcuts to "Add Resident" or "Report Incident" without navigating menus.

2. Medication Screen (eMAR)

Replacing paper MAR charts with a digital safety system.

```
+-------------------------------------------------------------+
|  MEDICATION ROUND: MORNING (08:00)                          |
+-------------------------------------------------------------+
|  1. Paracetamol 500mg                                       |
|     Dose: 2 Tablets  |  Stock: 24 (OK)                      |
|     [ GIVE (Green) ]      [ REFUSE (Red) ]                  |
+-------------------------------------------------------------+
```

Worklow:

- Clicking `GIVE` reduces the stock count automatically.

- Clicking **REFUSE** asks for a mandatory reason (e.g., "Resident Sleeping").

3. Staff Rota (Scheduling)

Located in **HR Management → Staff Profile**.

```
| MON | TUE | WED | THU | FRI |
|-----|-----|-----|-----|-----|
| 08-20| OFF | 08-20| 08-20| OFF |
| [Red]| [Grn]| [Red]| [Red]| [Grn]|
```

Red Boxes = Working. **Green Boxes** = Day Off.

📘 Part 3: Detailed Module Guide

1. Resident Management

Purpose: To store digital care files.

- **Admitting:** Click "Add Resident", fill in name, DOB, and room number.
- **Risk Assessments:** Upload documents defining fall risks or dietary needs.

2. Incident Reports

Purpose: Legal documentation of accidents.

The system features a **6-Month Overview** chart to track trends (e.g., "Are falls increasing?"). Reports can be exported to PDF for CQC inspections.

3. Compliance & Audits

Purpose: To ensure the home meets regulatory standards.

- **Action Required Filter:** Instantly shows expired checks (e.g., "Fire Alarm Test Overdue").
- **Evidence:** You can upload photos of safety certificates directly to the record.

4. User Management (Security)

Who can see what?

Role	Access Level
Admin	Full Access (Can delete records).
Staff	Care Plans, Meds, and Rota only.
Client	Personal profile view only.

🚀 Summary & Next Steps

This system acts as a "Closed Loop". Every action feeds into a report.

- If you give a pill → Stock drops.
- If you verify a training cert → Compliance score goes up.
- If you log an incident → Analytics dashboard updates immediately.
